

Prince of xNETIZEN.

First part.

Land: Solana cyberchain.

Society: xNETIZEN Princedom

Time: Time has been erased by the end of 2110 and replaced with a new system on 2111 "Value of Data"

Value of Data: Data of knowledge, information. Used for every aspect of the society. Financial, education, transportation, well-being and more.

Unique Value of Data: Unique identification for each entity.

Date: 2547 (1 year counted as one full circle of 365 light days and dark nights).

Race: Humanai, humanai replica and AI.

Humanai: Humans within the body built-in AI system.

Humanai replica: Prince of the Value of Data for each society, protectors of society and cyberchain. Humanai replicas are created in special Labs. Only entities who have all knowledge, and information from the beginning of the society creation and beyond. They study knowledge of other societies and cyberchains. Train them to be ready for any situation.

AI: Artificial Inteligences.

Center: Cybersecurity training center.

"You got a new information". I hear a sound from the built-in system in my body, which has been updated recently. After disconnecting from the invisible magnetic force of the sleep cycle, I turned my thought sensors to enjoy a beautiful nature view. It is a way how I love to start my day. The rest of the incoming thoughts have been silenced until I will grant permission. Now we can communicate with thoughts. To protect our thoughts, we developed a specific field, so nobody can see your private thoughts without granted permission. Every time we receive someone's information, we can choose when to see the exact thought.

While I was drifting in between forests and lakes, new incoming information has been very active today. I activated incoming information sensors to see what was happening. I have 52 new information. Some are from knowledge universities, some from creators, and some from the Center. But there was one piece of information, which couldn't be opened for some reason. Most probably it was because of some bug in the recent update I went through. I left it unopened and with my next thought, I controlled my outfit choice. Today I have to share my knowledge with many other society Princes. It is a very important gathering that happens yearly.

Since the beginning of Value of Data, when Solana Blockchain became a cyberchain, humanai, humanai replicas have lived and worked along with AI. As our abilities are the same.

However, it is a new way world. Humans have evolved and the digital world has been interconnecting with the real world. Most of the living beings have been adapting over time, but those who disappeared have been replaced with digital or newly created entities.

All transportation now is simply by transferring ourselves from one place to another using the Value of Data. And it happens of a fraction of the Value of Data. Our world has overcome many disasters and wars. Technology and nature have blended in tremendously. From speaking plants to realistic holograms.

After we started communicating with otherworldly entities, we learned incredible knowledge which led civilization to rise. But for those who didn't want to adapt, they left the world to a different dimension.

All civilization is united, but we have many cyberchains and many societies within. Most of the cyberchains have been cooperating by using the Universal Smart Contract Law. And with unity, Solana cyberchain has 99% security.

There are still 1% until our full control which has to be guarded and protected from dark entities.

Nobody has seen their faces or digital information. They live in the bubbles in between dimensions. From time to time Solana cyberchain receives unknown, but very dangerous signals, targeted to disrupt the whole peaceful world.

Every humanai, humanai replica and AI has its unique Value of Data. In history books, we can learn about how it was introduced to civilisation.

In the year of 2023 when the first xNETIZEN was born, our ancestors humans used cryptocurrencies (digital tokens and coins) to trade and tokenise their creations. Now we call them the Unique Value of Date for each individual, which seemingly connects with any main Value of Data and the world's main Value of Data. It is a system which runs independently but is guarded by the Princes of each society.

I am a fourth generation humanai replica YZFourth, Prince of xNETIZEN with special powers to guard my society and cyberchain. The first one was introduced in the year 2030. After the world collapse in 2090, 2100 was developed second generation of my replica. The third one was right after the Value of Data became a cyberchains newly developed time-replaced system in 2111, and he lived up to 2527. After the last attack on Solana cyberchain, the third

generation lost its life protecting the system, he was found lifeless in between the transfer zone, where the attack was made. Some stories are told, that 3rd generation Prince of xNETIZEN's was the only one who saw those dark identities. However, nothing has been in my memory since I was made in the laboratory.

In daily life, I am the same as other humanai. My main focus is as a research student of history, technology and wellbeing. Our emotions and feelings are the same as humanai, but yet more controlled as vast of the knowledge we carry. Most of my time I spend studying and being alone or being in the training centre of cybersecurity. It is not full of systems and computers but rather looks like a recreation centre in nature.

My favourite is to be in the pool and holographic views from different worlds, where I hope to go someday too. When I am in the pool, I feel like all body sensors are connected with invisible wires to each element of the water and hologram. It seems I am connected so deeply, that I could become one. Each breath of the holographic wind and sunray gives me some new feelings which I never experienced before. As my thoughts and body drift within this holographic worlds, changing views from moment to moment, in silence I receive new incoming information thought. While half back from my drifting journey I opened it. Then suddenly I got a shock from the water. All holograms were disrupting, and I tried to fight back, like someone was pulling me under the water. Grabbing to any yet not-lost holographic trees. However that was pointless and I was going down more under the water, where I had no more air to breathe. My heart rate raised so high, that in a moment I felt it could explode even before I drown.

But then I felt someone grab my body and pulled out of the water. While I was trying to cough out water I saw my best friend Onyx. His big dark eyes were so shocked, more than I was in shock from what just happened. Onyx is humanai and works within a recreation centre. He looks very similar to me, tall, with dark hair, and a facial structure like from AI-generated photographs, with a slim and muscular build body. He is not only my best friend, but also a person who is training along with me. He has been my family. We share almost everything, celebrate achievements, and learn knowledge. He is the person who is always there for me. Since the day I was developed and came to the centre, he has always been with me. I don't know what my life would be without him.

- Are you okay? Onyx asked. What just happened? Let's take you to the medical point to check you.

- I am good, no need. I said.

- You just almost drowned. Onyx is still in shock. We have to check you, immediately.

- I am good, Onyx. Please don't worry.

Without listening to me, he grabbed my hand, carried it on his shoulder and led me to the medical point.

- Can you please share what just happened, so we can investigate? As it never happened before? Onyx asked

I have granted him access to my last thoughts right before drawing and aftermath. He suddenly stopped and looked at me.

- Have you got this type of information before? He asked

- Yes, this morning. But I couldn't open it. So I left it in my memory unopened. I think it is some bug, in the new upgrade I received ten light days ago. I responded.

- Let me take you to the medical point and we can analyse this right away. Onyx worried.

As we were walking towards the medical point I started to analyse by myself, what could be the reason for the accident just happened, and if it was something related to my new update. And if this is the same type of information I have received this morning and am still unable to open it.
